

Inert Ingredients Eligible for FIFRA 25(b) Pesticide Products Last Updated December 20, 2010

Provided below are the inert ingredients that are eligible for inclusion in pesticide products under the [Federal Insecticide, Fungicide, and Rodenticide Act \(FIFRA\)](#)'s [Section 25\(b\)](#). This listing of minimal risk inert ingredients updates what has been historically referred to as "4A" under [Pesticide Registration Notice 2000-6](#).

1. Commonly consumed food commodities, animal feed items, and edible fats and oils as described in [40 CFR 180.950](#)(a), (b), and (c) may be used as inert ingredients in FIFRA Section 25(b) pesticide products applied to food use sites (e.g., food crops, animals used for food) and in FIFRA Section 25(b) pesticide products applied to nonfood use sites (e.g., ornamental plants, highway right-of-ways, rodent control). Specific chemical substances listed under [40 CFR 180.950](#)(e) that are also acceptable for use as inert ingredients in FIFRA Section 25(b) pesticide products are included in the table below.

2. In addition to (1) above, the following inert ingredients are also eligible for inclusion in FIFRA Section 25(b) pesticide products. These ingredients are listed by CAS Registry Number and chemical name (common names are given, with systematic names included as synonyms in brackets where applicable). In addition, this listing has two columns to indicate whether the inert ingredient can be used in FIFRA Section 25(b) products applied to food use and/or nonfood use sites.
