

GHS Classification

ID1164

silver iodide

CAS 7783-96-2

Date Classified: Jun. 23, 2006 (Environmental Hazards: Mar. 31, 2006)

Physical Hazards

Reference Manual: GHS Classification Manual (Feb. 10, 2006)

Hazard class	Classification	symbol	signal word	hazard statement	Rational for the classification
1 Explosives	Not applicable	-	-	-	There are no chemical groups associated with explosive properties present in the molecules.
2 Flammable gases	Not applicable	-	-	-	Solid (GHS definition)
3 Flammable aerosols	Not applicable	-	-	-	Not aerosol products
4 Oxidizing gases	Not applicable	-	-	-	Solid (GHS definition)
5 Gases under pressure	Not applicable	-	-	-	Solid (GHS definition)
6 Flammable liquids	Not applicable	-	-	-	Solid (GHS definition)
7 Flammable solids	Not classified	-	-	-	Non-combustible (BGIA, GESTIS-database on hazardous substances, Accessed in 2006)
8 Self-reactive substances and mixtures	Not applicable	-	-	-	There are no chemical groups associated with explosive or self-reactive properties present in the molecule.
9 Pyrophoric liquids	Not applicable	-	-	-	Solid (GHS definition)
10 Pyrophoric solids	Not classified	-	-	-	Non-combustible (BGIA, GESTIS-database on hazardous substances, Accessed in 2006)
11 Self-heating substances and mixtures	Not classified	-	-	-	Non-combustible (BGIA, GESTIS-database on hazardous substances, accessed in 2006)
12 Substances and mixtures, which in contact with water, emit flammable gases	Not classified	-	-	-	Stable to water (the water solubility is obtained)
13 Oxidizing liquids	Not applicable	-	-	-	Solid (GHS definition)
14 Oxidizing solids	Classification not possible	-	-	-	No data available
15 Organic peroxides	Not applicable	-	-	-	Inorganic compound
16 Corrosive to metals	Classification not possible	-	-	-	Test methods applicable to solid substances are not available.

Health Hazards

Hazard class	Classification	symbol	signal word	hazard statement	Rational for the classification
1 Acute toxicity (oral)	Classification not possible	-	-	-	No data available
1 Acute toxicity (dermal)	Classification not possible	-	-	-	No data available
1 Acute toxicity (inhalation: gas)	Not applicable	-	-	-	Solid (GHS definition)
1 Acute toxicity (inhalation: vapour)	Classification not possible	-	-	-	No data available
1 Acute toxicity (inhalation: dust, mist)	Classification not possible	-	-	-	No data available
2 Skin corrosion / irritation	Classification not possible	-	-	-	No data available
3 Serious eye damage / eye irritation	Classification not possible	-	-	-	No data available
4 Respiratory/skin sensitization	respiratory sensitization: Classification not possible; Skin sensitization: Classification not possible	(Respiratory sensitization)-; (Skin sensitization)-	(Respiratory sensitization)-; (Skin sensitization)-	(Respiratory sensitization)-; (Skin sensitization)-	Respiratory sensitization: no data available. Skin sensitization: in the Association of Industrial Health (2005), although skin sensitization is suspected as iodine and its compound, there is no this product data, and since data is insufficient, it cannot classify.
5 Germ cell mutagenicity	Classification not possible	-	-	-	By the data of HSDB (2003), the response was partly seen in the in vitro mutagenicity test (Salmonella test). But it is near of concentration indicates cytotoxicity, or is a response in the isolated concentration, it is not judged as a positive. In addition, since there was no in vivo test data, it was presupposed that it cannot be classified.
6 Carcinogenicity	Classification not possible	-	-	-	There is no data of this product. It is classified as silver into D corresponding to outer Category in IRIS (1989). carcinogenic evaluation of iodine and iodized product are not found, and data is insufficient. Therefore, it cannot be classified.
7 Toxic to reproduction	Classification not possible	-	-	-	Although a silver compounds has description that there is no reproductive toxicity (PATTY (5th, 2001)), there is no data about the presence of reproductive toxicity of iodide and this product data is not found, it cannot classify.

8	Specific target organs/systemic toxicity following single exposure	Classification not possible	-	-	-	Although there is an example of accident of extensive exposure to two or more persons of silver iodide in HSDB (2003) and pathological conditions was not observed, it can not be classified due to insufficient data.
9	Specific target organs/systemic toxicity following repeated exposure	Classification not possible	-	-	-	Although there were descriptions that argyria is occurred by prolonged exposure of silver compounds to skin (PATTY, 5th, 200; ACGIH-TLV, 2005; HSDB, 2003), it was considered that there was no suggestion of significant effects on human health. Moreover, it could not be classified for lack of data because no data of this product was confirmed.
10	Aspiration hazard	Classification not possible	-	-	-	No data available

Environmental Hazards

Hazard class	Classification	symbol	signal word	hazard statement	Rational for the classification
11 Hazardous to the aquatic environment (acute)	Classification not possible	-	-	-	Insufficient data available.
11 Hazardous to the aquatic environment (chronic)	Classification not possible	-	-	-	Classification not possible due to lack of data
