Taiwan Chemical Substance Inventory (TCSI)

Updated on 5 Feb 2015 by Mr Little Pro. [[Disclaimer](#)] [[PDF](#)]

Taiwan's chemical substance inventory (TCSI) is compiled by the Ministry of Labor (MoL) and it contains more than 79,000 substances that were manufactured in or imported into Taiwan between 1 Jan 1993 and 31 Dec 2011. The inventory has been updated several times by two supplementary existing substance nominations.

The latest version of TCSI is launched on 24 Nov 2014 and is available for search via the following new address. The old address http://csnn.cla.gov.tw/content/Substance_home.aspx no longer works.

- http://csnn.osha.gov.tw/content/home/Substance_Home.aspx

Companies can search the inventory by Chinese name, English name or CAS No. You can also print out a copy of search record as proof of TCSI listings.

Tips on Searching Taiwan TCSI

A substance that cannot be found on above existing substance inventory will be regarded as a new substance in Taiwan (notification is required). Existing substances may also require registration under TCSCA. You need to comply with both [Toxic Chemical Substance Control Act \(TCSCA\)](#) and [Occupational Safety and Health Act \(OSHA\)](#).
