Chemical substances possess certain inherent or intrinsic properties that affect their dangerousness, which can make them corrosive, reactive, explosive, toxic or flammable (Yarto, Ize and Gavilán, 2003). A substance is said to be dangerous when has one or more of the following characteristics: it is dangerous to human health, It can cause fires and explosions or is considered dangerous for the environment. (Polytechnic University of Madrid, 2014).

Pesticides are usually made up of a substance that has an effect biocide: active ingredient (AI). Also, most pesticides are made up of substances other than the active ingredients known as inert ingredients or are also called, as "other ingredients" (Environmental Protection Agency (EPA) 2022). An inert ingredient is usually any substance or group of similar substances other than an active ingredient, which has no activity biological and is used as a conditioner of the active ingredient for the control of pests and diseases, it is intentionally included in a pesticide product (Fonseca and Matarrita, 1993). Some examples of inert ingredients are emulsifiers, solvents, carriers, aerosol propellants, fragrances, and dyes (EPA, 2022).

In addition to the inert ingredients that are part of synthetic pesticides formulated, these products can be mixed before being used in agriculture with adjuvants that contribute, assist or help to perform a better action when properly mixed with a formulated synthetic pesticide, in accordance with the

¹ In accordance with the provisions of section 10.8.1 of Executive Decree No. 43838 MAG-S-MINAE "Technical Regulation RTCR 509:2022. Agricultural Inputs Registry. Formulated Synthetic Pesticides, Technical Grade Active Ingredient, Adjuvants, Physical Vehicles and Related Substances for Agricultural Use".

indicated in numerals 4.12 and 4.13 of executive decree No. 43838 "RTCR 509:2022.

Agricultural Inputs Registry. Formulated Synthetic Pesticides, Active Ingredient Grade Technical, Adjuvants, Physical Vehicles and Related Substances for Agricultural Use" (Decree Executive N°43838-MAG-S MINAE, 2022).

There is also the use of related substances, which are substances intended for used in crops as synthetic repellents, attractants, sunscreens, substances applied to the product after harvest to protect it from deterioration During storage and transport, glues or rubbers, previous seed protectors to planting against the action of chemical substances, phytotoxicity protectors as well as growth regulators and physiological inducers, desiccants and defoliants (Decree Executive No. 43838-MAG-S-MINAE, article 1, numeral 4.72, 2022).

Many of the components commonly used for the formulation of Formulated synthetic pesticides, adjuvants and related substances have already been evaluated and considered of low danger to the environment and human health by authorities such as the United States Environmental Protection Agency (EPA, 2022), the Commission European Commission (REACH, 2007) and the European Chemicals Agency (ECHA, n.d.). Therefore, Therefore, the objective of this document is to provide the "List of Authorized Components for formulated synthetic pesticides, adjuvants and related substances", in order to speed up the registration and registration modifications of these types of products.

METHODOLOGY

In compliance with numeral 10.8.1 of Executive Decree No. 43838-MAG-S-MINAE developed the list of authorized components for synthetic pesticides formulated, adjuvants and related substances. For the preparation of the list present in the Annex 2 took into consideration the information provided by the Protection Agency United States Environmental Protection Agency (EPA), the European Commission and the European Chemicals (ECHA). These international organizations have been selected as reference, since they are supported by numerous toxicological and ecotoxicological studies short and long term, as well as the possible associated risks, which is why they are considered as the main entities referring to this topic.

The EPA website provides lists of inert pesticide ingredients (List 4A – List 4B), where they determine that the verification that a substance has a minimum risk is based on the general recognition of its chemical characteristics (toxicity) very low or practically non-toxic), as well as the properties of the substance and a history safe to use under reasonable circumstances (EPA, 2004, 2016, 2022).

As mentioned by the EPA (2022), minimal risk substances (List 4A) are recognized as safe for use in all pesticide products subject only to good agricultural or manufacturing practices. Furthermore, the EPA concludes based on the information collected that the ingredients on list A4 for pesticide products do not will adversely affect human health or the environment, however, it is important pay attention to those ingredients that have some degree of impact and assess their applicability to prevent future damage.

Similarly, the EPA notes that substances on List 4 that have higher acute toxicity are generally classified as List 4B (EPA, 2022).

The list provided in Annex IV (exemptions from the obligation) was also used. of registration in accordance with Article 2(7)(a) of the European Union Regulation: Registration, Evaluation, Authorization and Restriction of Chemicals (REACH), which It was adopted to improve the protection of human health and the environment from the risks which can produce the use of chemical substances and mixtures, and in turn enhance the competitiveness of the European Union's chemical industry. It also promotes innovative methods alternatives for the evaluation of the danger of substances, in order to reduce the number of animal testing (REACH, 2007).

On the other hand, the information available at ECHA was consulted, where it is considered those substances that represent some level of danger either for the environment or for human health. It can be consulted on the website: <https://echa.europa.eu/es/home> by the CAS number of each chemical substance (ECHA, n.d.).

Finally, the three databases (EPA List 4A and 4B, REACH Annex 4) are unified and individual verification of each substance was carried out with its CAS number in the

environment, resulting in a leaked list that is published in Annex 2 of this document.

This list may be updated and modified by the reviewing authorities, competent authorities of the MS and MINAE, taking into consideration new inclusions or alerts that are indicated in the reference entities. The applicant must consult it prior to submitting the application for inclusion.

The user may, in turn, suggest the addition of new substances to the aforementioned list, with prior technical justification and subsequent assessment by the MS and MINAE, following the procedure indicated below:

PROCEDURE FOR REQUESTING INCLUSION OF SUBSTANCES

For applications for inclusion in this list, a chemical substance shall be understood as a particular class of homogeneous matter whose composition is fixed and chemically defined, under a single CAS² number. Therefore, mixtures of substances cannot be included.

These substances correspond to components of formulations, adjuvants, related substances³ and other agricultural products.

1. The applicant must submit to the SFE an application for inclusion of the substance of interest in the list published in digital format. For this request, the following must be attached: form available in Annex 1 of this document.
2. The applicant must attach in digital format the link and the technical information and scientific evidence supporting the request, which must come from some authority internationally recognized (EPA, EFSA/ECHA/REACH/OECD).
3. The applicant shall ensure that the substance is not included in Annex 2.
4. **It is mandatory that the substance being requested to be included is free of warnings. dangerous under any use and presentation, both for the environment and for human health in the reference organizations used for the preparation**

² According to section 4 definition CAS number of DE 43838-MAG-S-MINAE.

³ According to section 4 definitions of adjuvant and related substance of DE 43838-MAG-S-MINAE.
