

## New substances: Ministerial Conditions

The MC notice may be applied to a new substance or living organisms when Environment and Climate Change Canada and Health Canada suspect that a new substance may meet the criteria for toxic under CEPA, so control measures are imposed to minimize any risk to the environment or human health.

When Ministerial conditions are imposed, the notifier can manufacture or import the substance, subject to restrictions. The notifier and, if specified in the condition, the notifier's customers are obliged to abide by these conditions and keep records as indicated. Substances subject to ministerial conditions are not eligible for addition to the Domestic Substances List.

Therefore, any new notifier who wishes to manufacture or import the same substance must submit a New Substances Notification. This may result in similar conditions being imposed. Information is organized by substance and includes links to relevant Canada Gazette publications. Confidential accession numbers and masked names have been presented for confidential substances.
